AI Enablement

fusionSpan

Claude enablement, data connections, and agents for associations and nonprofits.

Most organizations buy AI licenses long before they get value from them. fusionSpan closes that gap: connecting Claude to the systems your work actually lives in, and getting your staff using it safely.

Claude Onboarding & Enablement

For organizations with licenses and no starting point

- A working session showing how Claude applies at your organization, using the tools you already run
- Example prompts your team adapts into internal skills and plugins

Data Connections and MCP

For organizations whose answers live in a system of record

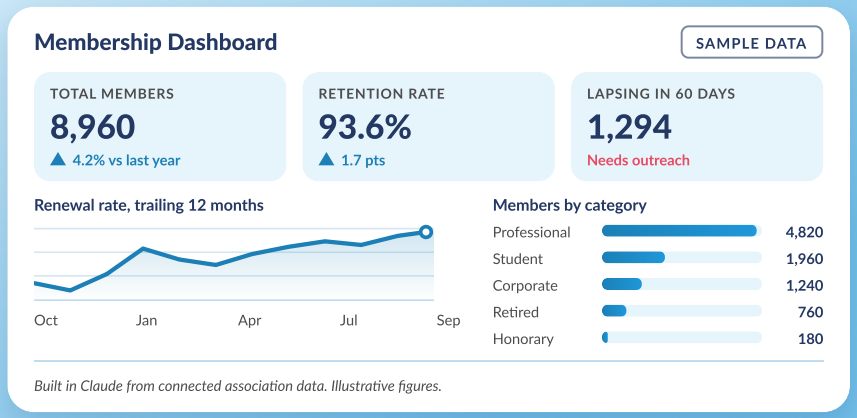

- Salesforce Hosted MCP enablement for Salesforce, Nonprofit Cloud, fusionCore, Fonteva, and Nimble AMS
- Custom MCP servers for SQL Server and other databases

Custom skills built for Fonteva, Nimble AMS, and fusionCore

Business Intelligence and Dashboards

For teams that need to see the data, not just query it

- Interactive dashboards built from your live AMS and CRM data
- Built in conversation, so a change takes minutes rather than a sprint

AI Security and Governance

For leadership deciding whether to widen access

- Walkthrough of permissions, data access, and administrative controls
- Access mapped to your existing role structure

Agent Development

For high-volume, repeatable workflows

- Intake, onboarding, and approval workflows
- Document and application processing with data extraction

2–4 WEEKS

HOW ENGAGEMENTS RUN

A typical first engagement runs two to four weeks and ends with something working, not a roadmap.

Claude Certified Services Partner

fusionSpan is Certified in the Claude Partner Network.
