fusionSpan

Accelerators

Take Your Success To The Next Level — Accelerate Your Salesforce Implementation And Maximize Your ROI.

An Accelerator is a well-tested unmanaged package that fusionSpan provides to its customers as a starting point to accelerate the development of a particular feature. Accelerators are heavily leveraged in the Salesforce ecosystem to speed up the delivery of critical functionality. As Accelerator code is unmanaged, it is owned by the customer and can be modified by any vendor or staff member to meet their organization's needs.

Financial Period Close

50+ Installations

Allows your financial team to close out a financial period with the certainty that transactions or transaction lines are locked, putting the check and balances needed for audits in place.

LockBox And Payment Applicator

54+ Installations

Lockbox/Payment Applicator allows organizations to streamline the application of payments within their Salesforce instance. Within the LockBox object, staff can upload, validate, and apply payments for multiple orders quickly. These files are uploaded in an excel (.cvs) format.

Fonteva Community Group To Chatter Sync

72+ Installations

Synchronize community group members with chatter group members for better collaboration in the Fonteva portal.

My Downloads

50+ Installations

My Downloads allows customers to view/ access their digital assets within the customer portal, regardless of file type. Quickly configure download link labels, table display settings, and more. Access to digital assets can be protected by Badge status or Item settings.

Object Roster Views

90+ Installations

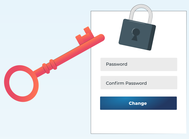

Display any object's data within the customer portal so customers can manage records (for example, to associate contacts with an organization). Dynamically generated tables work with any standard or custom object. Staff may define which fields are displayed, editable, and who can modify them. Additional use cases include: Employee Roster Management, CEU Tracking, Disclosures or Conflicts of Interest, Committee Participation, and more.

Files And Folders For Community Groups

50+ Installations

Extend the functionality of your Community Groups to allow members to access or upload files within a specific folder, based on their Community Group permissions.

New User Registration

50+ Installations

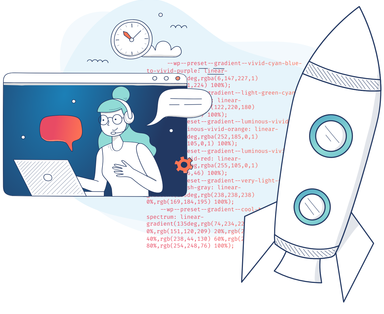

Simplify new user registration with domain matching or company lookup. Define rules around required fields, account creation, and account matching. Contains features including Banned Email Domains, reCAPTCHA, Enable Contact Email Match, and more.

Membership Power Pack

50+ Installations

Streamline and tailor the dues renewal experience for your members in Fonteva. Configurable, granular controls allow you to set who can view invoices, renew, and pay online. Give members control over Membership, Renewal Notice, and Terms & Conditions Community functionality.

Why Use Salesforce Accelerators

- Accelerator code is prebuilt and well-tested. It prevents the need to code from scratch and is easily extensible.
- Setting up an accelerator has a lower (one-time) cost compared to the time it would take to build the feature from scratch.
- It is owned by the customer just like any configuration and has been successfully implemented for customers in the past.
- A fusionSpan Accelerator brings a set of features that customers can take advantage of quickly.
- fusionSpan will warranty the Accelerator for 30 days, provided no changes are made to the Accelerator code.
- All support questions for Accelerators can be submitted to our support team.
